OLIST | OPERATIONS & CUSTOMER EXPERIENCE

EXECUTIVE DECISION BRIEF • Historical marketplace data

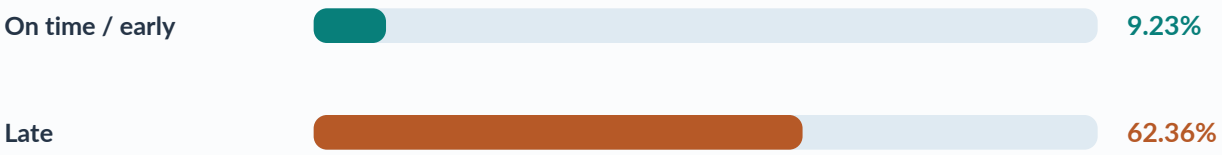
96,470	6.77%	62.36%	+139.94%
DELIVERIES ANALYZED	DELIVERED LATE	LOW RATINGS | LATE	ORDER GROWTH YOY

EXECUTIVE READOUT

Late deliveries were associated with markedly worse customer reviews: 62.36% of reviewed late orders received an average score of 2 or below, versus 9.23% of reviewed on-time orders. Geographic and seller benchmarks identify investigation candidates, not established causes.

CUSTOMER EXPERIENCE GAP

Low-rated reviewed orders (average review score <= 2)



GEOGRAPHIC SCREENING

Lateness varies in rate and in number of affected orders.

RJ	12.11%	1,495	High rate + material volume
BA	12.16%	396	High rate
MA	17.43%	125	Highest rate; smaller base
SP	4.49%	1,820	Most late orders; below avg rate

COMMERCIAL CONTEXT

January–August 2018 vs 2017: delivered-order volume rose 139.94% and merchandise value rose 141.13%; average merchandise value per delivered order changed only 0.49%. Growth was overwhelmingly volume-driven. These are not Olist corporate revenue figures.

Where leadership should act first

RECOMMENDATION

Approve a targeted 90-day investigation and controlled pilot focused on RJ and BA, with seller-level process diagnostics and high-volume monitoring in SP. Test changes against comparable orders; expand only when operational and cost evidence supports it.

PRIORITY DECISIONS

01 **RJ + BA: route diagnostics**
Review fulfillment, transit, carrier handoff and destination-level exceptions.

02 **Seller operations**
Screen dispatch and route patterns; account for seller and destination mix.

03 **SP: volume concentration**
Examine clusters of late orders without mistaking volume for a poor rate.

04 **Non-delivery-related issues**
Investigate product quality and service problems among on-time low-rated orders.

PROPOSED 90-DAY WORKPLAN

DAYS 01–30
DIAGNOSE
Validate delay sources, reference cohorts and data completeness.

DAYS 31–60
PILOT
Test targeted changes; compare to similar non-pilot orders.

DAYS 61–90
EVALUATE
Review punctuality, ratings, operational cost and trade-offs.

MEASURE SUCCESS

Primary: late-delivery rate and absolute late-order count, by destination and comparable seller cohort. Guardrails: review coverage, low-rating share, purchase-to-delivery time, customer contact issues, freight charges and actual pilot costs. Numeric targets and return on investment require internal data.

INTERPRETATION & DATA LIMITATIONS

Historical observational relationships are not causal evidence. No verified carrier costs, route ownership or true marketplace revenue are available. Seller excess late-order counts are benchmark differences, not proven preventable delays. Observed 180-day repeat rate: 3.11% for eligible first-observed-purchase cohorts.
